Chapter II

Literatures Cited

In any scientific investigation or a research a comprehensive review of relevant. Literature is very essential. Its main function apart from determining the work done before concerning the problem area i.e. area of investigation .it provides an insight into the methods and procedures and create a basis for poor interpretation of findings. As direct reference on all the items is not in abundance, certain specific references along with some indirect references have been incorporated in this chapter for the purpose of meaningful use. Review of Literature is related to Sustainable, Participatory, Approaches, Enterprise, Management, Activities and Development.

Authon	Contont
	Content
Nanya,-1 (2008)	It is concluded that small-scale
	reclamation area has an advantage in
	sustainability over large-scale
	development area, which is managed by
	the government. In order to improve the
	livelihood of rural society, it is
	important to put more focus on farmer
	empowerment: the major challenge
	would be revisiting how to manage the
	society to make the best use of both
	human and social resources.
Dong,-S-K;	This paper suggested that traditional
Lassoie,-J-P;	resource management practices have
Yan,-Z-L;	been ignored in the past, which has
Sharma,-E;	resulted in conflicts and resource
Shrestha,-K-K;	degradation. In this context, a survey
Pariya,-D (2007)	was conducted in the Rasuwa District of
	northern Nepal to identify existing
	indigenous ranglend management
	systems, examine the challenges facing
	the development of sustainable
	practices and suggest possible
	strategies for promoting their
	development.
Sola,-P(2005)	Sustainable resource use should be
	based on socially responsible economic
	development while promoting the
	resource base and the status of the
	ecosystem. The efforts to attain social
	responsibility make indigenous
	knowledge systems (IKS) a crucial
	component of any development and
	conservation intervention.
	Yan,-Z-L; Sharma,-E; Shrestha,-K-K; Pariya,-D (2007)

	J;	management strategies further interactive
	Vodouhe,-	research is proposed, involving all
	S(2004)	stakeholders.
Tropical-	Angassa,-A;	A decline in total biomass production and
Grasslands.	Beyene,-F	animal performance in the study areas was
	(2003)	observed during recent years. Participatory
		planning and development intervention
		strategies based on traditional knowledge
		and values were suggested for sustainable
		resource use and development.
Forestry-	Shmatkov,-	One of the basic principles of the project has
Chronicle.	N;	been a participatory approach to project
	Brigham,-	development and implementation. Although
	T(2003)	community economic development is the
		primary goal, the revival and sharing of
		indigenous knowledge about NTFPs has been
		identified by participants as a key issue,
		and is a focus of educational materials
		being developed through the project.

Agriculture- and-Human-	The legalization of urban agriculture as a step towards securing lands for the urban poor.
Values.	The illegal status has left a governance vacuum, which should be filled through policy formulation and regular
	institutionalized management in a participatory manner including all relevant stakeholders if food security has to be increased and environment improved in an urban development context.

4. Livelihood Strategies

Geoforum	Salisbury,-D-	Sustainability goals require researchers
2007;	S; Schmink,-M	and policy makers to address the still
		experimental status of these forest-
		based organizational units, the
		heterogeneity and dynamism of
		extractives livelihoods, and the necessary
		importance of small-scale cattle ranching
		for insurance and income generation
		among many former and current
		extractivists.
Mountain-	Maselli,-D;	Livestock production is a key livelihood
Research-and-	Syfrig,-	strategy and a way of life for most
Development.	E;Inam-ur-	smallholders in the Hindukush. Depending
	Rahim(2005)	on ethnicity, access to land, labour force,
		and ecological conditions, small to large
		herds of goats, sheep, cattle and buffalo
		serve as a primary or secondary source of
		livelihood.

Biosystems-	Twomlow,-S;	Sustainability is a key issue for economic
Engineering.	O'-Neill,-D;	security in the longer term, and depends
	Sims,-B; Ellis-	on many interacting factors both within
	Jones,-J;	and outside the tasks of crop
	Jafry,-T (2002)	production. The most significant of these
		factors are discussed and it is emphasized
		that involving farmers provides a
		reliable means of accounting for them
		and enabling the farmers to apply new
		knowledge to raise productivity, but
		within the contexts of their own livelihood
		strategies

5. Livelihood Activities

Agriculture.		is an increasing trend of urbanization in the
		last two decades. Irrigation water accounts
		for approximately 90% of the total
		utilization of water resources. India stands
		at a crossroads in institutional options for
		natural resources management at the
		local and village levels.

7. Sustainable Livelihood Management

Communities,- livelihoods- and-natural- resources:- action- research-and- policy-change- in-Asia.	Le-Van- An(2006)	It should be concluded that community- based upland natural resource management approaches should balance long-term resource management sustainability, mainly through resource tenure issues that are typically complex and difficult to resolve, with satisfying the shorter-term livelihood needs of villagers.
Current- Issues-in- Tourism.	Zografos,- C; Oglethorpe,- D (2004)	This paper demonstrates how this methodology can be usefully applied to integrate qualitative and quantitative research, consider stakeholder preferences in the decision-making process and provide policy information helpful in conceptualizing the interplay of social and environmental objectives of sustainable tourism. In this way the methodology can help improve the participatory community management and planning of ecotourism as a livelihood economic activity .
Livelihood- and-gender:- equity-in- community- resource- management.	Krishna,-S- (2004)	This book critically examines the complex process of mainstreaming gender in natural resource management in India. The contributors build a 'genderscape' of community resource rights in varied contexts; unravel the gender barriers in traditional practices, community institutions and modern systems of governance; document diverse approaches to livelihood; and present a strong case for gender equality in sustainable resource management.
