Varicocele is an enlargement of the veins within the loose bag of skin that holds your testicles (scrotum).

Varicoceles are a common cause of low sperm production and decreased sperm quality, which can cause infertility.

However, not all varicoceles affect sperm production. Varicoceles can also cause testicles to fail to develop normally or shrink.

Symptoms

A varicocele often produces no signs or symptoms. Rarely, it might cause pain. The pain may

- Ø Vary from sharp to dull discomfort
- Ø Increase with standing or physical exertion, especially over long periods
- Ø Worsen over the course of a day
- Ø Be relieved when you lie on your back

Varicocele are easy to diagnose may not need treatment and only surgery required but in Homeopathy medicine required for reducing pain
